

lfe_docs(3)

Robert Virding

2016

NAME

`lfe_docs` - Lisp Flavoured Erlang (LFE) documentation handling.

SYNOPSIS

This module provides functions to parse docstrings in LFE module sources in EEP48 format.

EXPORTS

`make_chunk(Mod, CompilerInfo) -> {ok, DocsChunk}`

Parse a module's docstrings and return a documentation chunk.

`make_docs_info(Mod, CompilerInfo) -> {ok, DocsInfo}`

Parse a module's docstrings and return the documentation info.

`get_module_docs(Module | Binary) -> {ok, DocsInfo} | {error, Error}`

Extract the documentation from a module documentation chunk and return it in the documentation format of the current Erlang version.
